

How to use the magnussoft® ScreenRecorder Professional

magnussoft® ScreenRecorder Professional is a professional recording software that supports you in recording videos with high output quality.

Below you will find solutions for using magnussoft® ScreenRecorder Professional.

How to record videos from your computere

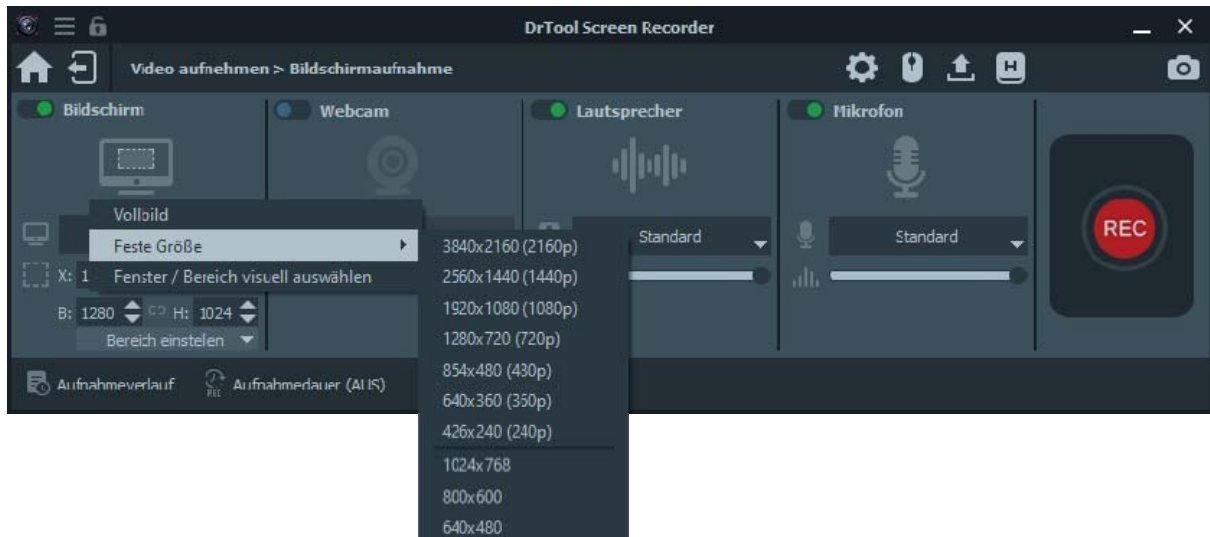

Step 1: Start magnussoft® ScreenRecorder Professional on your computer.

Step 2. Click on the Video recorder option to open the video recorder menu. Here you can record videos with or without audio.

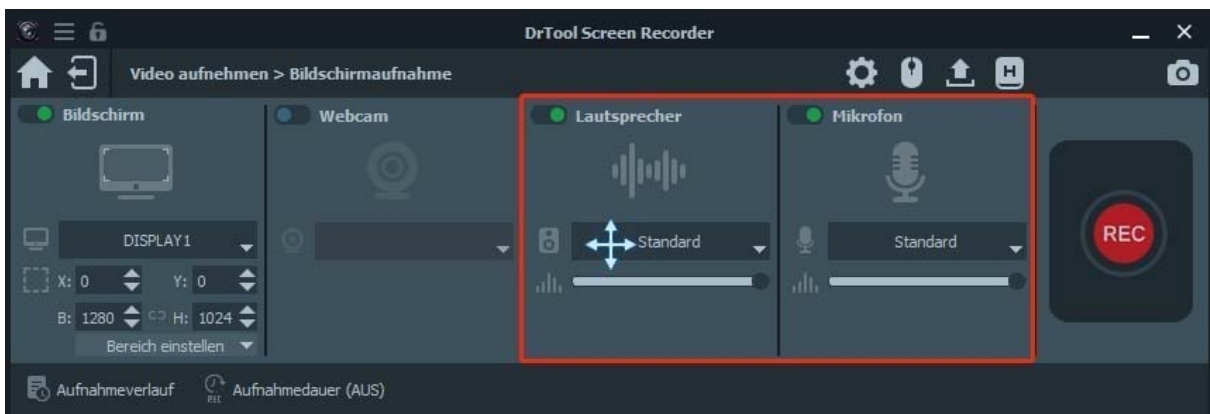

Step 3. In the video recorder window, you can select a full screen or a fixed screen such as 3840*2160, 1920*1080, 1280*720, 854*480, 1024*768, 640*480, etc. You can also click Customize > Select area/window to set an individual recording area with the cursor.

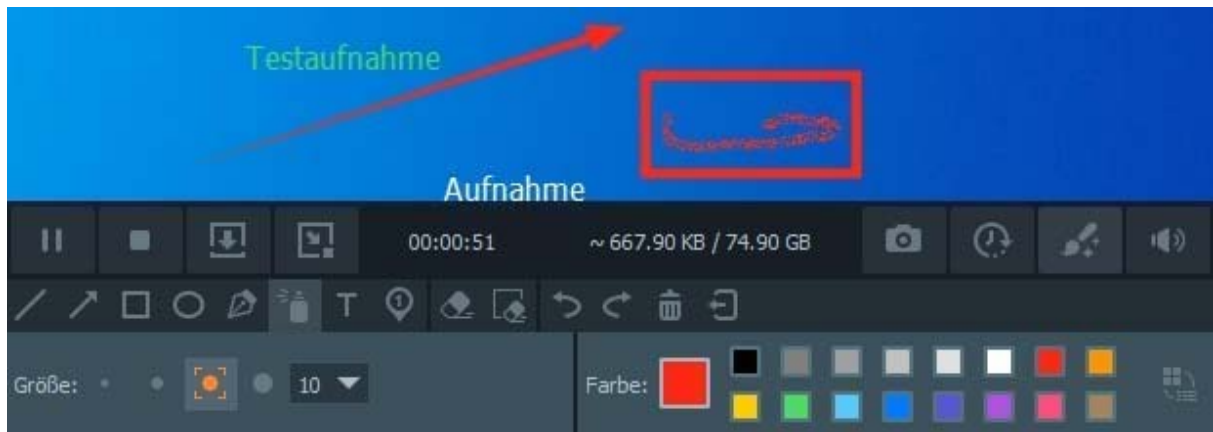

Step 4. Select the audio source by activating the option System sound, Microphone or both.

For recording videos, audios and lectures, you can only activate the System sound option. To record games, webinars, meetings or video tutorials, you may need to activate the System sound and Microphone options at the same time.

If you want to record the sound of the computer speaker or microphone, you can change the sound source using the drop-down option below. To change the volume for the sources, use the slider.

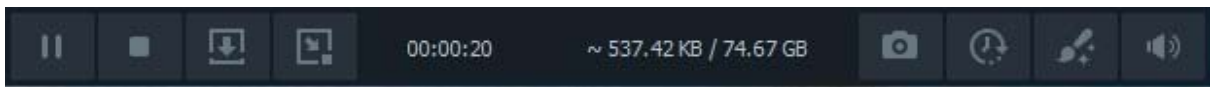

Step 5. During recording, you can add content to the video such as text, lines, arrows and certain labels. The functions are similar to those of a simple drawing program.

Step 6. Click on the REC button to start the screen recording on your computer.

After recording, you can click on the Stop button to see a preview of the recorded video.

In the preview, it is possible to select a specific area of the recording with the editing tool in order to save only the required part.

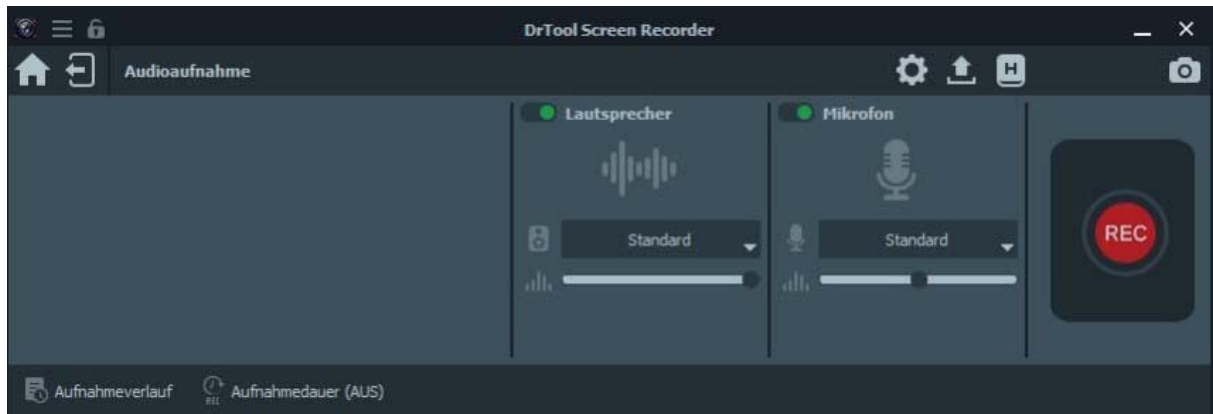

Note: All your video or audio recordings are saved in the Recording history list. You can click on the recording history to view, edit or delete them.

Part 2: How to record audio from your computer

Step 1. Start magnussoft® ScreenRecorder Professional on your computer and click Audio Recorder to open the audio recording interface.

Step 2. Set the audio recording to system sound or microphone as required. You can activate the microphone option and deactivate the system sound if you only want to record the microphone sound. If you want to record both the sound from your computer and the microphone, you must activate both the microphone and the system sound.

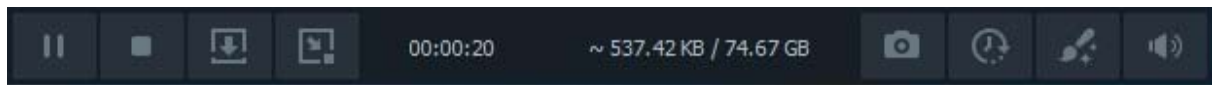

You can change the sound source for the speaker using the drop-down option under the speaker.

If you have more than one microphone, simply select the desired source in the drop-down option for the microphone.

You can use the respective sliders to set the volume to the desired value.

Step 3. After recording, you can click on the Stop button to visualize a preview of the recorded sound.

In the preview, it is possible to select a specific area of the recording with the editing tool in order to save only the required part.

Part 3. How to record a game from the computer

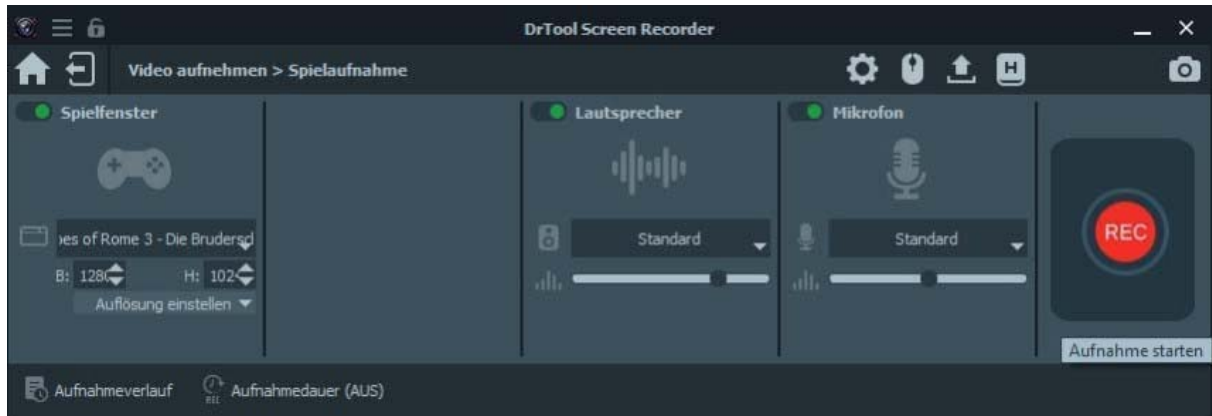

Step 1. First start the game you want to record. Start magnussoft® ScreenRecorder Professional and select Game Recorder to record your game.

Step 2. In the Game Recorder window, go to the Select game field and click on the down arrow icon to select your current game from the list. The recording area depends on the size of the game window.

Step 3. When you are ready, click the REC button to start recording. While the game is being recorded, you can use the functions in the toolbar, e.g. take snapshots, set a schedule for the recording and adjust the volume.

Step 4. As soon as the recording is finished, click on the Stop button to end the recording process. You can then preview and crop your recordings before saving them. When you are satisfied with the result, click on the Save button.

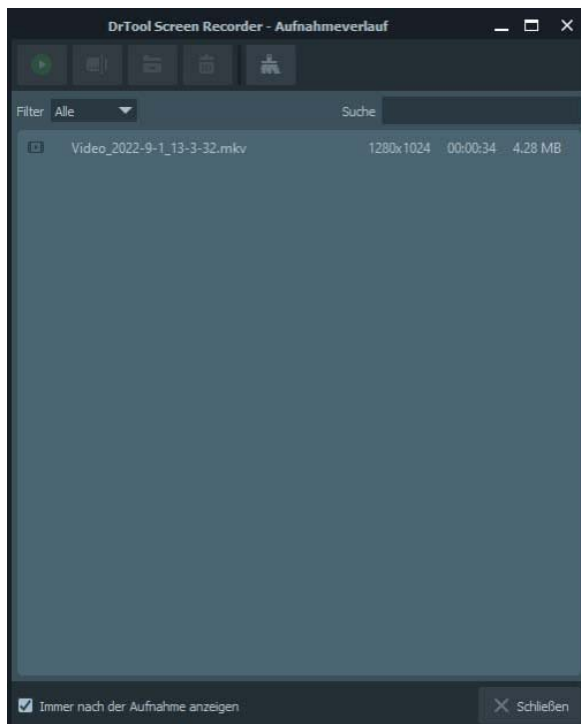

Then give your file a name and select the destination folder.

Then click on the Next button to start exporting your recording file.

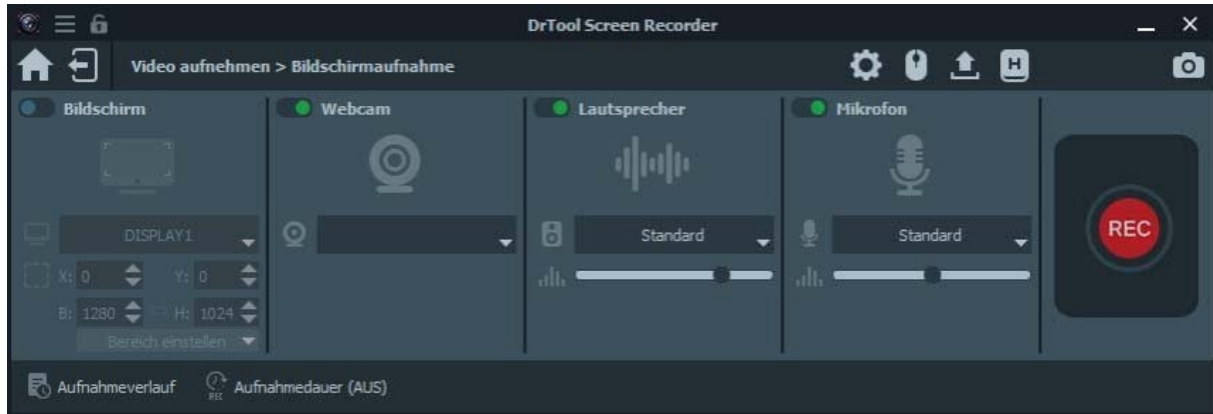

Step 6. Once you have successfully exported the video, you will be redirected to the recording library where you can manage your files. You can play, rename and delete the file.

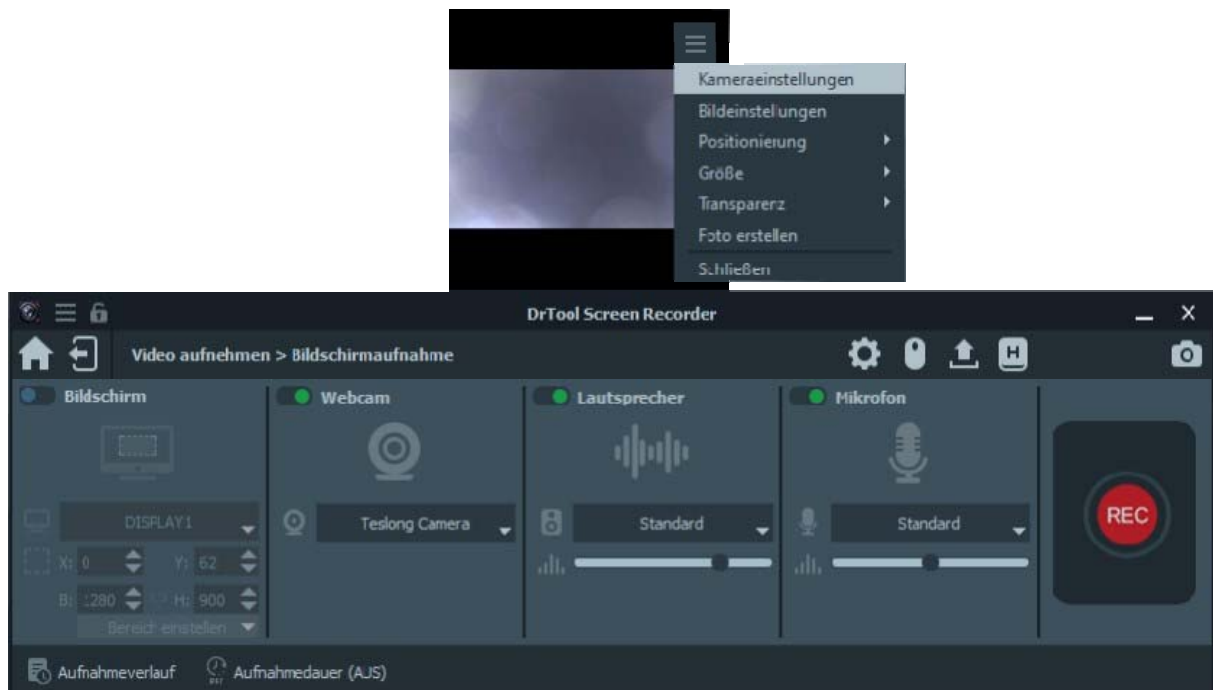

Part 4. How to record from a webcam

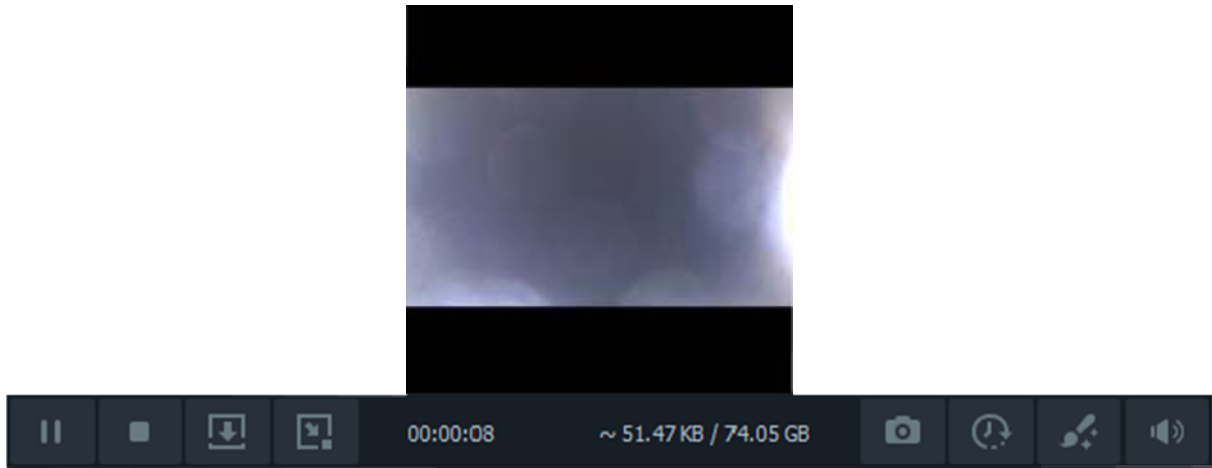

Step 1. Open magnussoft® ScreenRecorder Professional on your computer. Then select the Webcam option.

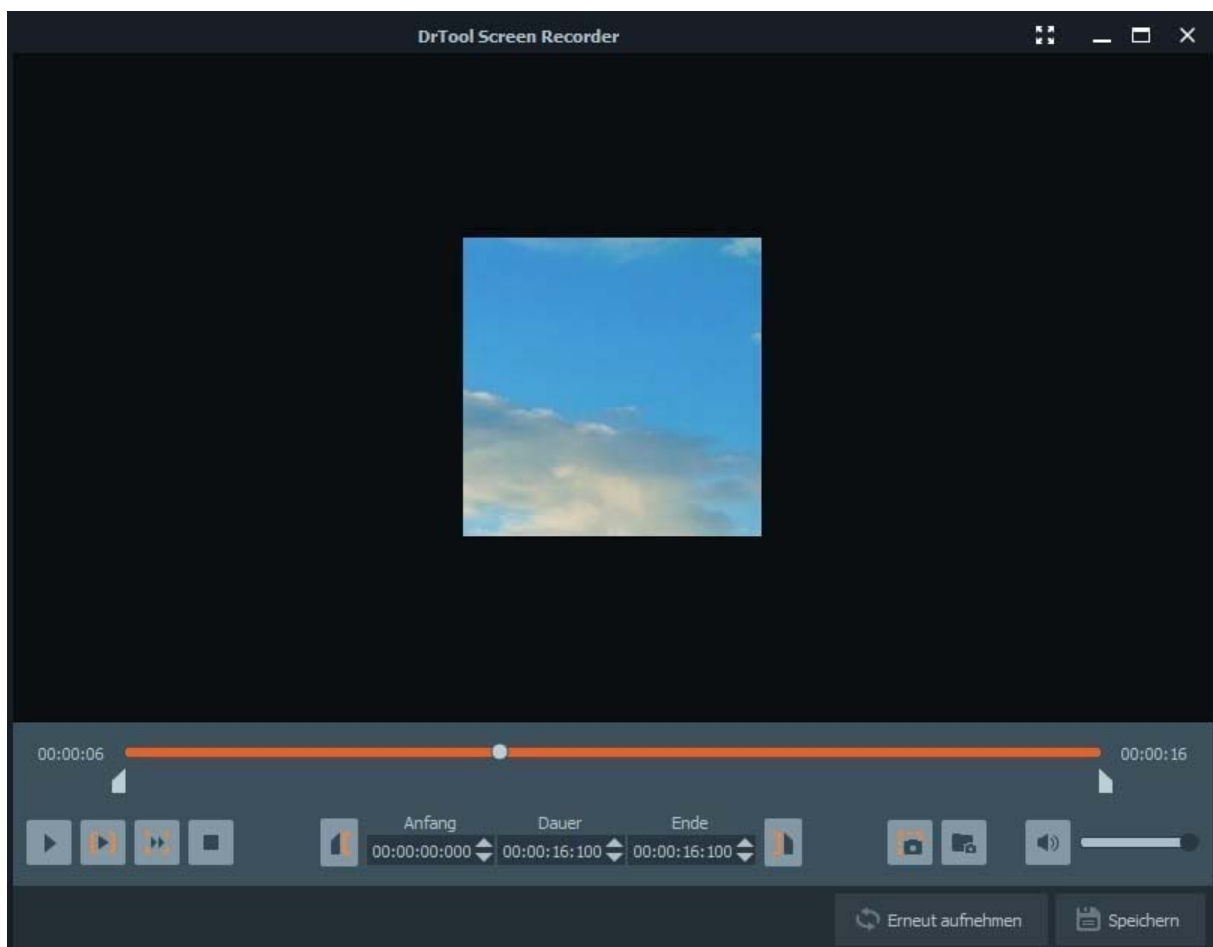

Step 2. You should then see a preview window with your camera image. Next to it is a settings window in which you can change the source camera, adjust the camera effects, select the resolution, change the volume and rotate the image. If you are happy with all the settings, simply click on the Record button.

Step 3. You can interrupt or stop the process at any time during recording. You can also take a snapshot by clicking on the camera icon in the toolbar.

Step 4. As soon as you have finished recording, you can preview the video and trim it as you wish. After editing, please select the Export button.

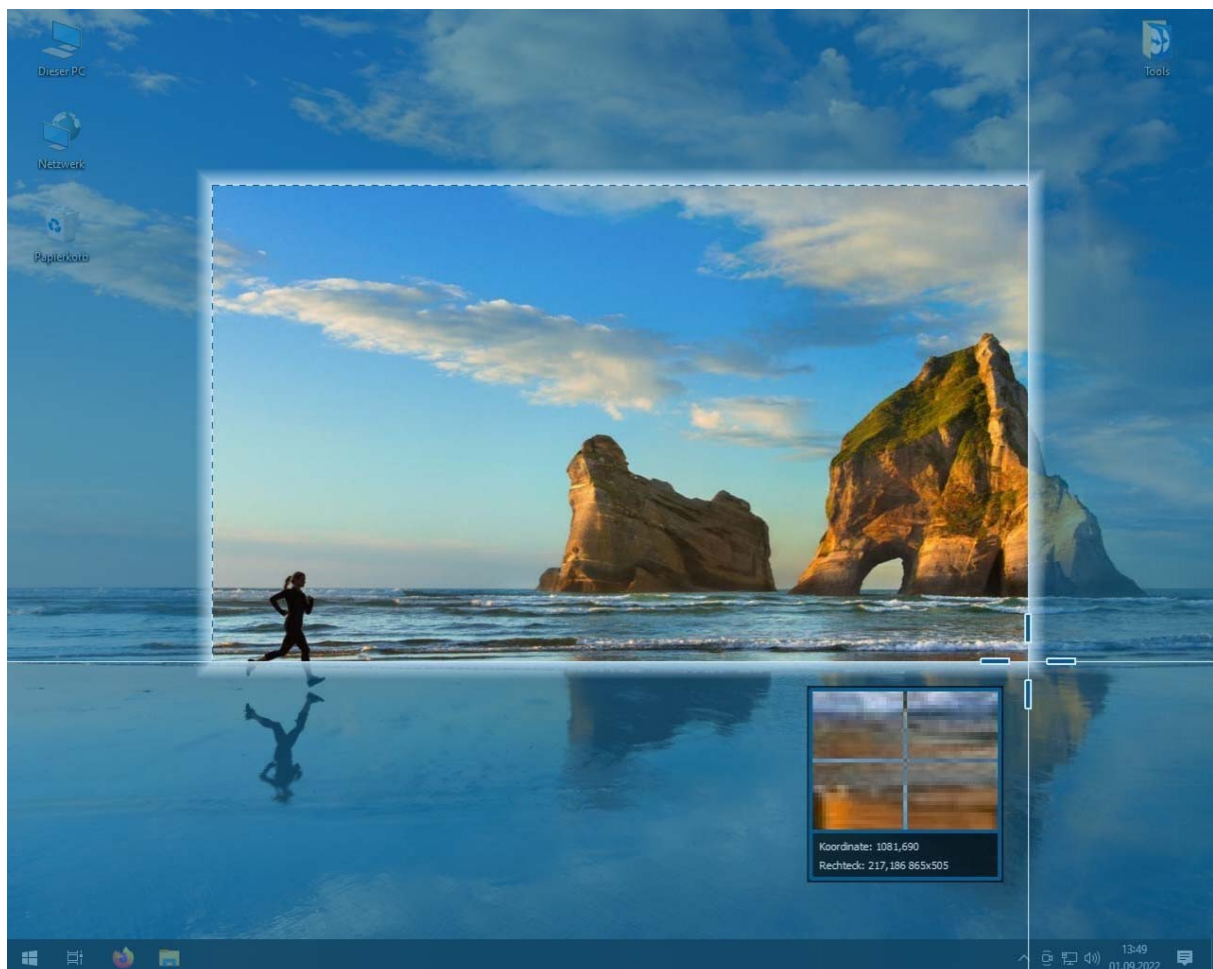

Part 5. How to take a screenshot

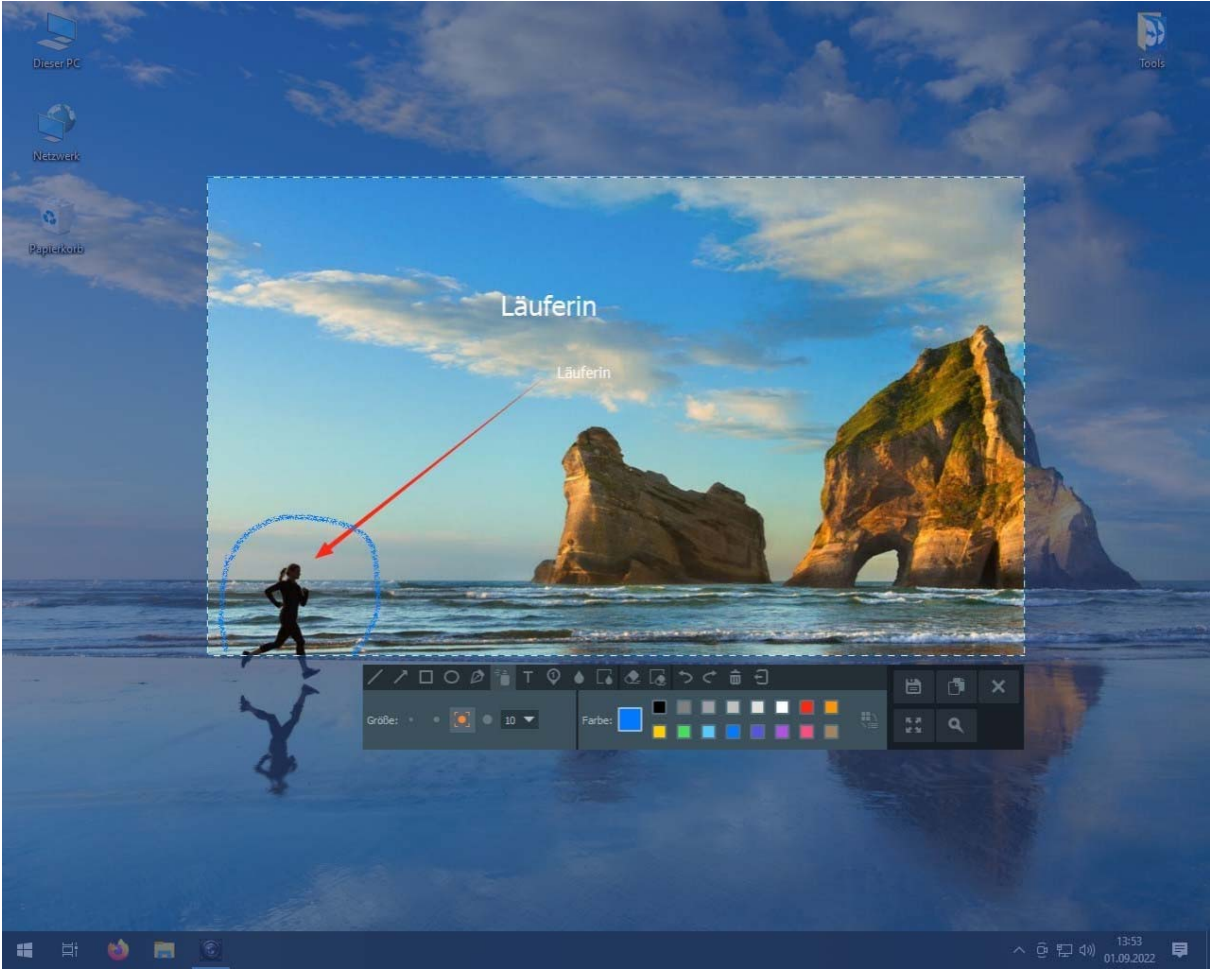

Step 1. Open magnussoft® ScreenRecorder Professional and click on Screen Capture to take a snapshot of your screen directly.

Step 2. You can select the screenshot area as you wish; it is possible to capture an active window or a freehand area. You can also add any desired labels such as rectangle, circle, line, arrow, text, color, etc.

You can also add any desired labels such as rectangle, circle, line, arrow, text, color, etc.

Step 3. After editing, you can click on the save icon to save the snapshot in a suitable image format.

Part 6. How to create a pre-set recording duration

Step 1. Run magnussoft® ScreenRecorder Professional and click on Recording duration at the bottom to set the duration of the next or all recordings.

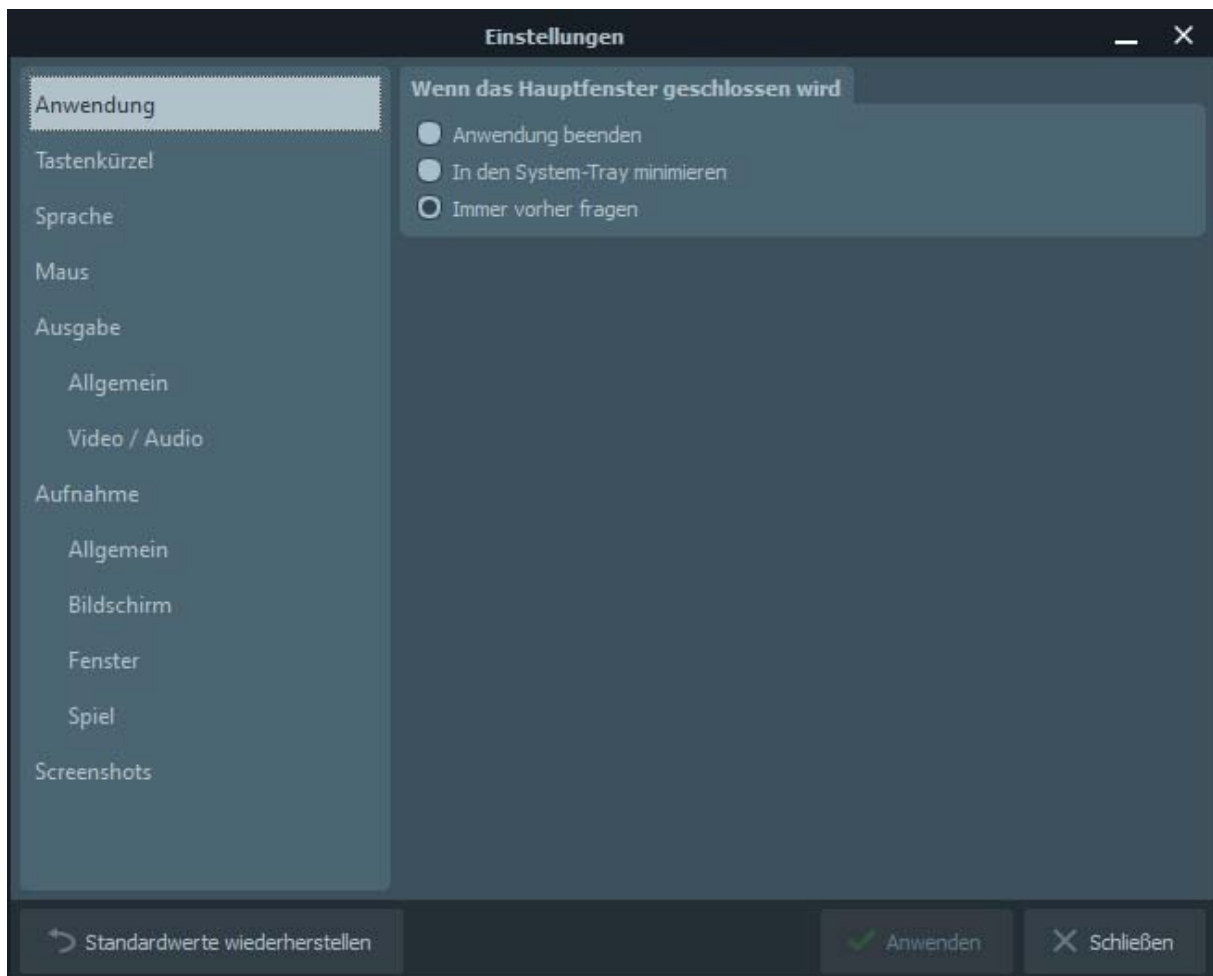

Part 7. Customize all presets

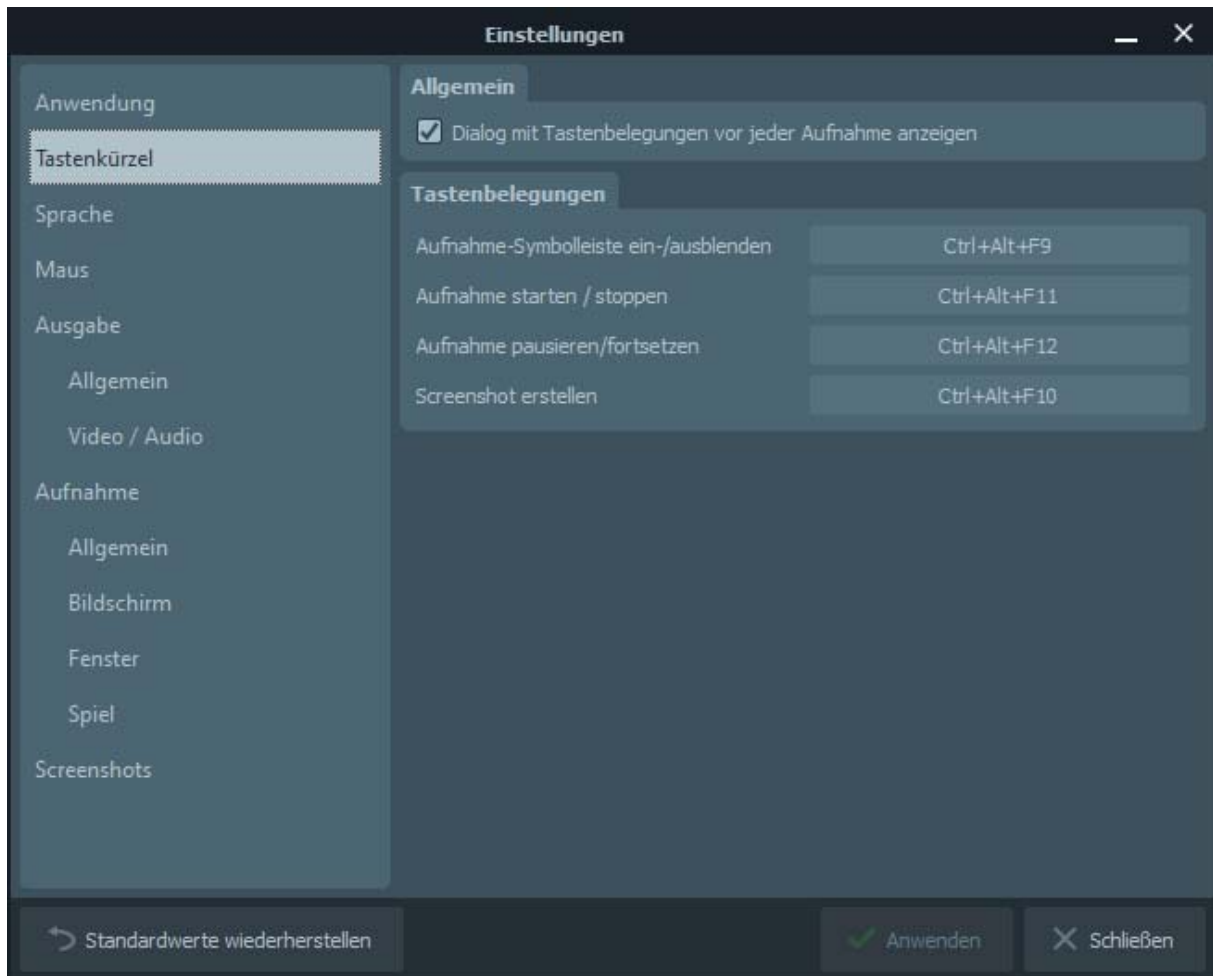

To access the menu for all presets and program parameters, select the entry "Settings".

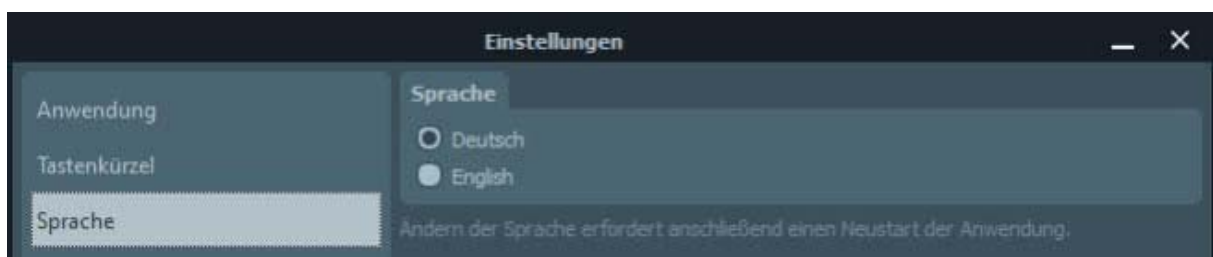

1. On the "Application" tab, you can specify what should happen when the program is closed.

2. On the "Shortcut keys" tab, you can specify which key is to be used for a specific function. So-called hot keys.

3. The program language can be set on the "Language" tab; German and English are currently offered.

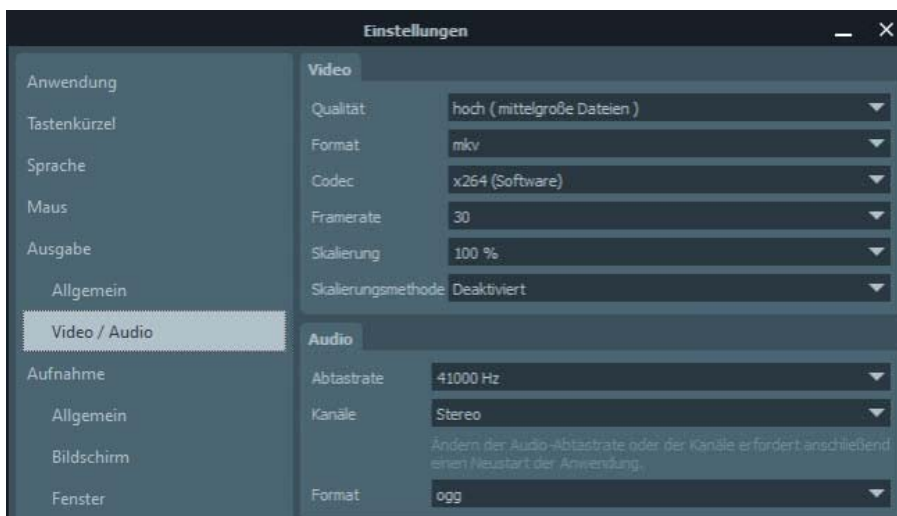

4. On the Mouse tab, you can show the mouse pointer, make mouse clicks and set the mouse area flexibly.

5. On the Output tab, you can select the storage location for temp files and the storage location for the finished product in the General area.

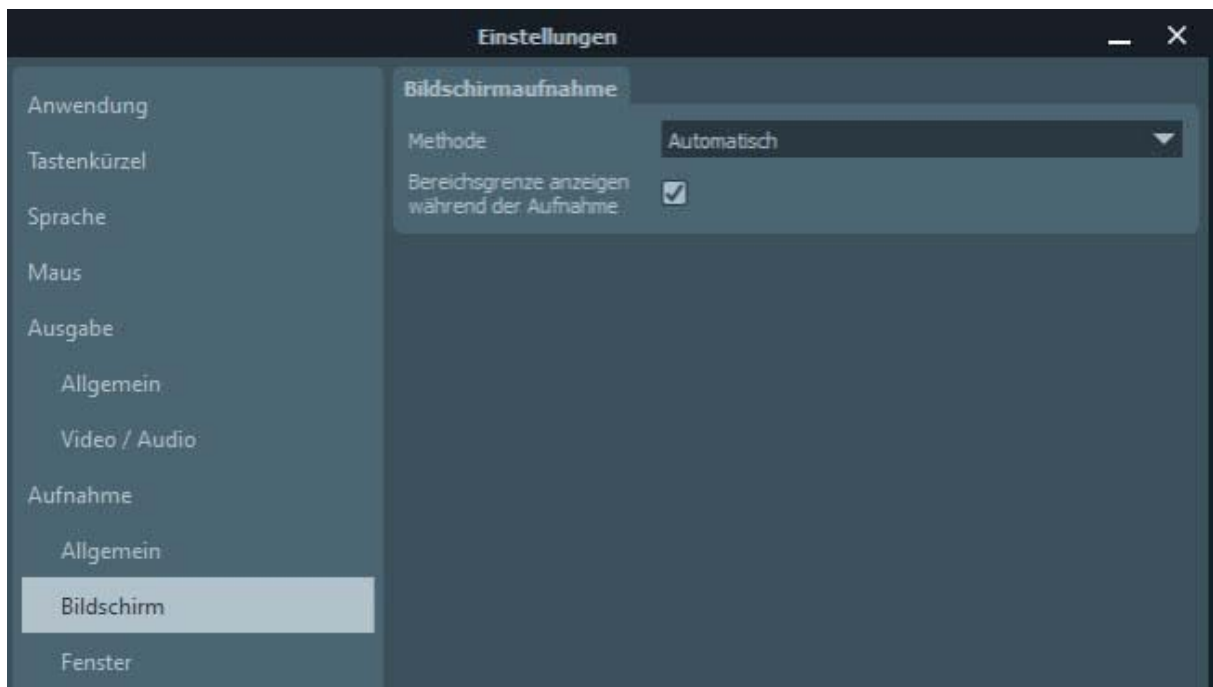

In the video/audio area, you can set the video/audio format and quality, the video codec and frame rate as well as the screenshot format. You can also set the quality of the audio recording in the sound settings.

6. On the Recording tab, you can make various settings for the program interface in the General area.

The Screen area allows the recording method that the PC makes available.

The settings in the windows, game and screenshots area are made in the same way.
